Flammability of fabric can be drastically reduced through the use of AMEETUFF Fabric Guard FLAME RETARDANT SPRAY - FIRE RETARDANT SPRAY. Many natural fibers, including cotton, can be topically treated with it reducing the fabric's flammability to the extent that it becomes non-combustible. During a fire, AMEETUFF Fabric Guard FLAME RETARDANT SPRAY reacts with the gases and tars generated naturally by the fabric, converting the gases and tars to carbon char, thus extinguishing the flame or fire.

Ameetuff Fabric Guard - spray for cotton, poly-cotton & silk foliage, banners, flags, drapes, curtains, etc , AMEETUFF Fabric Guard is used in Schools, Day Care Centers, Assisted Care Living, Office Buildings and many others use our products for a wide variety of projects.

AMEETUFF Fabric Guard for natural fibers and polyester's such as: canvas, denim, muslin, cotton and Cotton Blends. Fire Safety Codes are changing, stay current on fire protection of your Curtains, Drapes, Linens, Flags and Banners for trade shows, events, schools, day cares, nursing homes, offices and more.

AMEETUFF Fabric Guard FLAME RETARDANT SPRAY has been tested under the different environment conditions

AMEETUFF Fabric Guard treated fabric can be laundered or dry-cleaned as recommended by the fabric manufacturer. In the case of fabrics that are designated as "FLAME RETARDANT SPRAY TREATED", that have been topically treated with AMEETUFF Fabric Guard flame retardancy of the fabric will dissipate over time, particularly with repeated cleaning. AMEETUFF Fabric Guard treated fabrics must be dry-cleaned with a non-liquid cleaning agent.

Typically, the flame retardancy of topically treated fabric is certified for one year, though the actual length of time in which the treatment remains effective will vary based on the number of times the treated fabric is dry-cleaned and the environmental conditions in which the treated fabric is used. It is recommended that topically treated fabric be re-tested for flame retardancy on an annual basis, and re-treated after every 4 to 5 cleanings.

AMEETUFF Fabric Guard can be used on Drapes / Draperies, Artificial Silk Foliage, Room Separators, Banners, Flags, Wall hangings, Linens, Curtains, Stage / Theater Drapes, Window shades, Hospital Curtains, Crafts, Vertical Blinds, Household Fabrics, Painters Canvas, Carpets / Rugs, Furniture, Insulation

AMEETUFF Fabric Guard is transparent, odor free, non toxic, environmentally safe around plants, animals and children.

In the past 6 to 12 months fire safety codes have changed all across the United States, more and more convention centers, haunted houses, malls, hospitals, hotels, [motels](#), office buildings, banks, schools, colleges, universities, dorms, jails, prisons, day care centers, theaters, restaurants, bars & clubs, churches or any other building the public passes through or are invited to must be current with the fire safety codes for drapes, curtains, carpeting, rugs, wall decors, upholstered furniture, banners, silk foliage, flags or any other fabrics displayed, are all regulated by fire safety codes. Update your fabrics now with AMEETUFF Fabric Guard.

The National Association of State Fire Marshal's Office recommends that all fabrics and textiles be treated by the use of a FLAME RETARDANT SPRAY designed for fabrics, although it is not possible to make combustible fabrics and furnishings completely resistant to charring and decomposition when exposed to flame, fire or sparks.
